-----ModuleNotFoundError Traceback
(most recent call last)<ipython-input-4-299f5456d9b7...

The error message:

```
ModuleNotFoundError: No module named 'langchain_community'
```

indicates that Python cannot find the `langchain_community` library. This usually means one of the following:

1. Library Not Installed:

- The `langchain_community` library is not installed in your current Python environment.

2. Incorrect Installation:

- The library might be installed, but not correctly.
- There could be issues with the installation path or dependencies.

3. Environment Issues:

- You might be working in the wrong Python environment (e.g., a different virtual environment or a different system-wide Python
